ELECTRONICS AND COMMUNICATIONS IN JAPAN

Part 1: Communications

CONTENTS FOR 1991

Page

NUMBER 1

Kazuo Iguchi, Shigeo Amemiya, Hiroshi Takeo, and Kouji Tezuka. A Study on Architecture of Optical Passive Bus for Broadband Customer Premises Network 1

Hideaki Yoshino and Hisayoshi Inamori. Traffic Analysis for Control Channel Access Protocols of Mobile Communications Systems 13

Yasuo Yoshida, Toru Kawauchi, and Kazuto Tanaka. Image Coding Techniques Using One-Dimensional Orthogonal Transformation and Prediction 26

Kiyohiro Noguchi, Hirokazu Ohnishi, and Tadanobu Okada. Statistical Multiplexing Effects and Traffic Control Parameters in an ATM Network 35

Tadasu Sunada. Analog Optical Fiber Transmission and Distribution System for HDTV Signals Using LED Module with Multiple Output Fibers 45

Hitoshi Obara. Distributed ATM Cross-Connect Switch Architecture Using Transmission Scheduling Control 55

Tsutomu Tanaka and Noboru Okamura. Multiple Transmission Systems Using PFM and PWM . . 65

Hiroshi Ohta and Nobuyuki Tokura. A Distributed Access Control Tchnique for ATM Optical Local Loops 81

Kouichi Ohnuma and Risaburo Sato. A Statistical Measurement Method for Wideband Random Signals Utilizing Time-Sharing Signal Processing Technique 94

Akihiro Kajiwara and Masao Nakagawa. PLL Synthesizer for Fast Frequency Hopping Spread Spectrum Communication 105

NUMBER 2

Hideo Kishimoto. An Asynchronous Correlation Receiver for a Bus-Type Twisted Pair LAN . . . 1

Masanori Ohya and Hiroki Suyari. Optimization of Error Probability in Quantum Control Communication Processes 10

Kazunori Kotani and Makoto Miyahara. Objective Picture Quality Scale by Neural Networks (PQS-NN) 19

Minoru Matsui, Masafumi Hagiwara, and Masao Nakagawa. New Block Demodulation with an Automatic Equalizer 28

Tsutomu Satoyoshi and Mikio Takahara. Evaluation of Token Ring Characteritics Containing Subnetworks of CSMA/CD-LAN 37

Masahiro Karikomi and Yoshihide Yamada. Characteristics Improvement by Synthesizing Nonaxisymmetrical Aperture Distribution 45

NUMBER 1

Kazuo Iguchi, Shigeo Amemiya, Hiroshi Takeo, and Kouji Tezuka. A Study on Architecture of Optical Passive Bus for Broadband Customer Premises Network 1

Hideaki Yoshino and Hisayoshi Inamori. Traffic Analysis for Control Channel Access Protocols of Mobile Communications Systems 13

Yasuo Yoshida, Toru Kawauchi, and Kazuto Tanaka. Image Coding Techniques Using One-Dimensional Orthogonal Transformation and Prediction 26

Kiyohiro Noguchi, Hirokazu Ohnishi, and Tadanobu Okada. Statistical Multiplexing Effects and Traffic Control Parameters in an ATM Network 35

Tadasu Sunada. Analog Optical Fiber Transmission and Distribution System for HDTV Signals Using LED Module with Multiple Output Fibers 45

Hitoshi Obara. Distributed ATM Cross-Connect Switch Architecture Using Transmission Scheduling Control 55

Tsutomu Tanaka and Noboru Okamura. Multiple Transmission Systems Using PFM and PWM . . 65

Hiroshi Ohta and Nobuyuki Tokura. A Distributed Access Control Tchnique for ATM Optical Local Loops 81

Kouichi Ohnuma and Risaburo Sato. A Statistical Measurement Method for Wideband Random Signals Utilizing Time-Sharing Signal Processing Technique 94

Akihiro Kajiwara and Masao Nakagawa. PLL Synthesizer for Fast Frequency Hopping Spread Spectrum Communication 105

NUMBER 2

Hideo Kishimoto. An Asynchronous Correlation Receiver for a Bus-Type Twisted Pair LAN . . . 1

Masanori Ohya and Hiroki Suyari. Optimization of Error Probability in Quantum Control Communication Processes 10

Kazunori Kotani and Makoto Miyahara. Objective Picture Quality Scale by Neural Networks (PQS-NN) 19

Minoru Matsui, Masafumi Hagiwara, and Masao Nakagawa. New Block Demodulation with an Automatic Equalizer 28

Tsutomu Satoyoshi and Mikio Takahara. Evaluation of Token Ring Characteritics Containing Subnetworks of CSMA/CD-LAN 37

Masahiro Karikomi and Yoshihide Yamada. Characteristics Improvement by Synthesizing Nonaxisymmetrical Aperture Distribution 45

Page

Hong Zhou, Susumu Yoshida, and Fumio Ikegami. Detection of Multipath Signal by Cross-Channel Inference Measurement 55
Koh-Ichiro Morita, Masato Ishiguro, Yoshihiro Chikada, Tomio Kanzawa, and Toshikazu Takahashi. Tracing Accuracy of Astronomical Objects in the Nobeyama Millimeter Array 67
Eiichi Oka. Ray-Tracing Analysis of Anomalous Propagation Through Horizontally Nonuniform Surface Duct 79
Masataka Otsuka, Norihiko Omuro, Kenichi Kakizaki, Seiji Saitoh, Michiko Kuroda, Kazuo Horiuchi, and Teruzane Soejima. Relation between Spacing and Receiving Efficiency of Finite Rectenna Array 88
Osamu Kobayashi, Yukihiko Matsuzaka, and Haruto Hirosawa. Measurement of Polarimetric Backscattering Characteristics of Random Media 97
Yasunori Kumon and Takehiko Tsukiji. An Analysis of the Crossed Twin Delta Loop Antennas with Circular Polarization 108

NUMBER 3

Tadao Saito, Hitosi Aida, and Ichiro Inoue. A Star-Type Local Area Network Having Simultaneous Multiple Transmission Capability 1
Kaiji Mukumoto and Akira Fukuda. Performance Analysis of Wide Zone AVI Systems 11
Hideo Sawami, Yoshitaka Morikawa, and Hiroshi Hamada. A Transform Coding for Compression of Offset-Sampled Image Data 21
Xiao-Ming Liu, Jin Igarashi, and Hikaru Miyamoto. A Packet-Switched Network Optimization Method with a Different Kind of Channel Rate for Each Link and the Fairness on Grade of Service 33
Jing Su and Yoshinori Sakai. A Priority Control Method of Burst Multiplexing Network with the Feedback of Delay Quality 45
Masaharu Komatsu. Priority Go-Back-N ARQ Schemes 56
Yoshiro Hakamada, Kimio Oguchi, and Nobuyuki Tokura. Design and Performance of a Repeater for CSMA/CD Passive Optical Star Network Connection 66
Akira Hiroike and Tadashi Matsumoto. Performance Evaluation of Radio Link Control Protocol Using Stop-and-Wait ARQ in Mobile Radio Systems 78
Kohei Nomoto, Takahiko Fujisaka, Tetsuo Kirimoto, Yoshimasa Ohashi, and Michimasa Kondo. Optimization of the Coherent Integration Number in a Tracking System Consisting of a Radar Sensor and a Kalman Filter 88
Sidic Erkin and Nion Sock Chang. Theoretical Analysis of a Leaky Millimeter-Wave Antenna Consisting of a Layered Magnetic Slab Image Line with Periodic Corrugation 97
Koji Goto, Ken'ichi Araki, and Koji Yasukawa. Effects of Antenna Pointing Errors on the Design of Heterodyne Optical Intersatellite Communications 107

NUMBER 4

Yoshitsugu Kondo and Kiyomi Sato. Hierarchical Service Control Scheme for Intelligent Network Services 1
Hiroshi Inai, Tokumi Yokohira, Masayuki Murata, and Hideo Miyahara. Performance Evaluation of Layered Communication Protocol 13
Yoshiro Hakamata and Kimio Oguchi. Study on Performance Improvement of CRV Collision Detection Method 26
Yoshiro Hakamata and Kenji Takemoto. Clamping Circuit Design for Multi/Gbit/s Baseband Transmission Systems 38

Page

Yoshiaki Tanaka, Tomoyuki Ueno, Jungo Inoue, and Minoru Akiyama. Interrupted Voice Quality Evaluation and Adaptive Delay Control in a Voice Packet Communication System 46
Yoshiaki Tanaka, Katsuyuki Miyakoshi, and Minoru Akiyama. Revenue Maximization Control of a Communication Network by the Use of Hierarchical Fuzzy System 56
Keizo Cho and Yoshihide Yamada. Impedance Characteristics of the Normal Mode helical Antenna with a Nearby Conducting Plate 67
Yasuhiro Ito. Propagation Characteristics for Mobile Reception of Satellite Broadcasting in Urban Areas 76
Takashi Yamaguchi, Yoshihisa Okumura, and Yoshifumi Amemiya. Wave Impedance in the Near Field Around the Fundamental Electromantic Radiating Elements 86
Toshiaki Matsunaga, Kazunori Uchida, and Takeaki Noda. Electromagnetic Wave Excitation in a Rectangular Tunnel with Impedance Walls 96
Shozo Komaki. Theoretical Analysis of Capacity-Controlled Digital Microwave Radio Transmission 104

NUMBER 5

Toru Hasegawa, Toshihiko Kato, and Hiroki Horiuchi. Development of Translator from Protocol Specifications Based on Estelle and ASSN.1 to Ada 1
Hitoshi Obara, Hitoshi Uemattu, Satoru Okamoto, and Haruhiko Matunaga. A Distributively Controlled Homogeneous Self-Routing Space Switch Network for Large-Capacity Cross-Connect Systems 12
Shinjiro Oshita and Takaya Yamazato. Error Performance of Triangular-Shaped Signal Set 21
Yuuji Izawa. A Spatial Frequency-Preserving Post-Filter for Block Image Coding 33
Tadashi Shirato, Hideaki Matsue, and Takehiro Murase. Fully Digitalized Transversal Equalizer for Digital Radio Systems 44
Masaharu Komatsu. Simple Go-Back-N ARQ Scheme for Satellite Channels with Double Acknowledgements 55
Koh-Ichiro Morita, Masato Ishiguro, and Hideyuki Kobayashi. Calibration of Antenna Positions in Millimeter Wave Interferometry 62
Yoshihiko Sugio, Toshio Makimoto, and Tetsuo Tsugawa. Two-Dimensional Analysis for Gain Enhancement of Dielectric Loaded Antenna with a Ground Plane 71
Takashi Morita, Norinobu Yoshida, and Ichiro Fukai. Analysis of Ferrite Absorber Considering Hysteresis and Relaxation Characteristics by Spatial Network Method 80
Tokio Taga. A Theoretical Study of Measurement of Cross Polarization Power Ratio (XPR) in Mobile Communication Environments 90
Jun Horikoshi, Osamu Kawano, and Kazuo Kurihara. Error Performance Improvement of Digital Transmission with $\pi/2$-TFSK in the Mobile Radio Environment 102

NUMBER 6

Hiroshi Watanabe and Yutaka Suzuki. Structure and Coding Characteristics of Adaptive Gain/Shape Vector Quantizer for Low Bit-Rate Motion Picture Coding 1
Wen De Zhong and Yoshikuni Onozato. An Output-Buffered ATM Switch in the Multichannel Bandwidth Allocation Environment 13
Koso Murakami, Toshio Shimoe, Satoshi Kuroyanagi, Hiroyuki Rokugawa, Minoru Seino, Naoyuki Mekada, and Tetsufumi Odagawa. High-Speed TDM Photonic Switching System 24
Kotaro Nakamura and Tetsuo Nakamura. The Helical Loaded Monopole Antenna 37

Page

Nobuyuki Kaku. Experiments on Suppression of Differential Lobing Using an Integrated SLS Antenna 42
Tetsuo Ooi and Yoichi Saito. Calculation Method of Separation Angles and Interference Between Satellite and Radio Relay Links in Atmospheric Refraction Condition 51
Kazuyoshi Shogen and Kenji Ohmaru. Contoured-Beam Antenna Using Shaped Offset-Fed Dual Reflectors for Broadcasting Satellites 60
Takashi Ebisui and Osami Ishida. 12/14-GHz Bands Double-Flare Type Triple-Mode Horn 70
Akihisa Nakajima, Kouji Yamamoto, Takanori Utano, and Shigefusa Suzuki. Signaling Protocol Architecture for a Digital Mobile Communications Network 80
Ken-ichi Konishi and Yoshiya Miyagaki. Error-Rate Performance of Block-Coded *M*-ary Modulation and Hard Decision Decoding Systems on Rayleigh Fading Channel 97
Sakae Chikara, Keiichi Saji, Matsuo Sekine, and Toshimitsu Musha. Suppression of Radar Clutter via Nonparametric CFAR 107

NUMBER 7

Takafumi Chujo, Hiroaki Komine, Keiji Miyazaki, Takao Ogura, and Tetsuo Soejima. Distributed Self-Healing Network and Its Optimum Spare-Capacity Assignment Algorithm 1
Shinya Nogami. Quality Control at the Cell Level and Its Characteritics in the ATM Network . . . 10
Chikara Yasuda, Chikato Fujiwara, and Takaaki Okumoto. An Adaptive CSMA/CD System 22
Masaaki Kawase, Shigeru Tomita, Nobuyuki Kasahara, and Takuya Uenoya. Optical Subscriber Loops by Nonpressurized Optical Fiber Cable 32
Shin-ichi Tachikawa and Gen Marubayashi. Majority Logic Combination Sequences Using M-Sequences for Rapid Acquisition in Direct Sequence/Spread Spectrum Communication Systems 42
Masatoshi Umeda, Masashi Murata, and Norihiko Morinaga. Trellis Coded Modulation for Mobile-Satellite Communication Using Space Diversity 57
Ken Ito, Kazuaki Hoshinoo, Minoru Ito, and Shunji Nishi. Ranging and Positioning Test of an Aircraft Using a Geostationary Satellite 67
Youjirou Ara and Haruo Ogiwara. Adaptive Equalization of Selective Fading Channel Based on AR-Model of Channel-Impulse-Response Fluctuation 76
Noboru Kuroiwa, Ryuji Kohno, and Hideki Imai. Design of a Directional Diversity Receiver Using an Adaptive Array Antenna 87
Hiroyuki Arai, Hiroyuki Teramoto, and Masahiro Toki. Planar Four-Direction Antenna for Antenna Pattern Diversity Reception 98
Akira Akeyama, Shuji Sakagami, and Shigeru Aoyama. UHF Band Spatial Correlation Characteristics of Mobile Base Station Antennas 107

NUMBER 8

Toshiaki Endoh, Hisaharu Kato, and Yasuhiro Yamazaki. Progressive Coding Scheme for Binary Images 1
Kenji Suzuki, Toshihiko Kato, and Sadao Obana. Implementation and Evaluation of X.25 and X.32 on Personal Computers 18
Kiyoshi Tanaka and Kineo Matsui. A Digital Signature Scheme on a Document for MH Facsimile Transmission 30

Page

Naoshi Sato. Framing System Using Error Checking Information 38
Shinji Yamashita and Takanori Okoshi. Double-Stage Phase-Diversity (DSPD) Scheme for Coherent Optical Fiber Communications—Optical Circuit Imbalance and Its Compensation 50
Shigeru Tomita and Kouichi Sutoh. Optical Loss Variation Due to Fiber Handling at the Jointing Point on the Subscriber Loop 62
Hirofumi Ichikawa and Takehiro Murase. Frequency Diversity Effects in Multicarrier Digital Radio Systems 70
Tetsu Tanaka, Shigeru Kozono, and Akira Akeyama. Urban Multipath Propagation Delay Characteristics in Mobile Communications 80
Takashi Matsudo and Yoshio Karasawa. Characteristics and Prediction Methods for the Occurrence Rate of SES in Available Time Affected by Tropospheric Scintillation 89
Tokio Taga. Analysis of Correlation Characteristics of Antenna Diversity in Land Mobile Radio Environments 101

NUMBER 9

Kiyohiro Noguchi and Tadanobu Okada. Resource Management Strategy in an ATM Network 1
Tokumi Yokohira, Masashi Sugano, Takeshi Nishida, and Hideo Miyahara. Capacity Assignment Algorithm for Packet-Switching Network with Unreliable Links 13
Hiromi Udea. A Method for Transporting SDH Signals Using Existing Transmission Systems 21
Shin-ichi Kuribayashi. Bandwidth Assignment Control in ATM System 30
Takeo Ohgane. Characteristics of CMA Adaptive Array for Selective Fading Compensation in Digital Land Mobile Radio Communications 43
Shoji Kondo, Noboru Nakamura, and Osamu Takizawa. Performance of a Digital FM Demodulator Using a Fixed-Point Arithmetic Operation 54
Makoto Kijima and Yoshihide Yamada. Relationship Between Array Excitation Distribution and Radiation Pattern Ripple Depth 63
Yoshio Hosoya. A Unified Prediction Method for Space Diversity Improvement in Received Power on Microwave Links 73
Shinobu Tokumaru. Energy Flux Densities of Electromagnetic Waves 82
Nozomu Hasebe and Yoshihiro Takahashi. Radiation Pattern Analysis of an Antenna Mounted on a Finite Ground Plane with a Dielectric Coating 89
Takao Itanami. Transmission-Type Wide-Band Periodic Filter 100

NUMBER 10

Hidefumi Ohsawa, Shigeo Kato, and Yasuhiko Yasuda. An Efficient Coding for Bi-Level Facsimile Images with Dynamic Arithmetic Coding 1
Susumu Nakayashiki, Jiro Kashio, Takeshi Harakawa, and Hiroyuki Wada. Wrapback Reconfiguration Mechanism of a Counter-Rotating Dual Token Ring 12
Michitaka Imai, Izumi Sankawa, and Shin-ichi Furukawa. A Study on Subscriber Optical Line Switching Networks 25
Shigeki Yamada and Toshio Ito. Performance Evaluation of Large-Scale Data Flow-Controlled Switching Systems 37
Tetsuo Shimono, Yoshio Kanda, Hideo Kitajima, and Yoshihiko Ogawa. Transform Image Coding with Edge Compensation 49

Page

Hiroaki Koga, Tetsuji Abe, Kazutoki Takeda, Akira Hayashi, and Yutaka Mitsunaga. Study of Fault-Location Expert Systems for Paired Cables 58

Yoshio Ebine, Tatsumi Takahashi, and Yoshihide Yamada. A Study of Vertical Space Diversity for a Land Mobile Radio 68

Osamu Hashimoto and Osamu Mizokami. A Study on Radar Cross Section of Helicopter Rotor Blade Rotating at High Speed 77

Shuji Sakagami and Kiyoshi Kuboi. Mobile Propagation Loss Prediction for Arbitrary Urban Environment 87

Akihiro Higashi and Hiroshi Suzuki. Dual-Mode Equalization for Digital Mobile Radio 100

NUMBER 11

Akiko Nakahara, Hitoshi Aida, and Tadao Saito. An Evaluation of Test Sequence Generation Methods for Communication Protocols 1

Ruixue Fan, Minoru Akiyama, and Yoshiaki Tanaka. An Input Buffer-Type ATM Switching System Using Schedule Comparison 17

Michihiro Ishizaka, Mitsuru Tsuchida, and Tetsuo Ideguchi. Parallel Processing Scheme of the Received Data Based on OSI Protocols 26

Takayuki Yoshino, Mayumi Abe, and Nobuo Hirano. Degradations of Bit-Error Ratio due to Echo in Optical OOK Communication Systems 42

Takayuki Yoshino, Mayumi Abe, and Nobuo Hirano. Edgeworth Series Expansion of APD Output Current and Its Application to the Evaluation of Bit-Error Ratio in Optical Communication Systems 55

Atsushi Imaoka and Masami Kihara. Transmission Delay Variation Compensation in Precision Time-Synchronous Networks 66

Nobuyuki Yoshizawa, Hidenobu Tada, Tsuneo Horiguchi, and Toshio Kurashima. Design and Sea Trial Results of a 48-Fiber Submarine Optical Fiber Cable 76

Yoshio Ebine. Investigation of a Compartment-Mounted Diversity Antenna for Land Mobile Radios 88

Fumito Kubota and Kazunori Okada. A Multiple Access Scheme for Radio Access Loop Carrying Multiple-Service Traffic—Virtual Circuit Multiple Access (VCMA) 99

NUMBER 12

Masahiro Karikomi, Yoshihide Yamada, and Ken-ichi Kagoshima. Wide-Angle Radiation Pattern Improvement of a Shaped Offset Tri-Reflector Antenna by Reducing Higher-Order Periodical Reflector Distortion I

Shuji Sakagami and Akira Akeyama. Correlation Bandwidth in Urban Mobile Radio Paths—Dependence of Distance, Base Station Antenna Height, and Average Building Height 11

Isamu Chiba and Seiji Mano. Null Beam Forming by Phase Control of Selected Elements in Phased-Array Antennas 23

Isao Ohtera and Hiroshi Ujiie. Focusing Properties of Leaky-Microwave from Equiangular Spiral Slotted Rectangular Waveguide 33

Takashi Yamaguchi, Yoshihisa Okumura, and Yoshifumi Amemiya. Shielding Effectiveness of a Metal Sheet Parallel to the Axis of a Circular Loop 44

Mutsumu Serizawa and Katsumi Sakakibara. A Local Area Radio Network Utilizing CSMA/CD Scheme for Its Inter-radio Base Station Network 54

Tokuro Kubo, Yasuyuki Oishi, Eisuke Fukuda, and Takeshi Takano. An Experimental TDMA Transmission System Using 1.5 GHz-Band $\pi/4$ Shifted QPSK 65
